SUBJECT INDEX TO VOLUME 11

Accurate and versatile solutions for probe-fed microstrip patch antennas and arrays, 1
A general Gauss theorem for evaluation singular integrals over polyhedral domains, 269
A method for the analysis of biisotropic planar waveguides—application to a grounded chiroslabguide, 209

Computation and optimization of beam efficiency for reflector antennas, 235
Computation of fields in electromagnetic systems with hysteresis, 393
Computer-aided design of microstrip patch arrays—a multiport network modeling approach, 89

Diffraction by a resistive half plane, 183

Electric field dependence of the competition between permanent and induced dipole orientation in suspensions of large anisotropic particles, 309
Elementary edge waves and the physical theory of diffraction, 125

Full wave analysis of proximity coupled rectangular microstrip antenna arrays, 21

Higher-order harmonics in electromagnetic scattering from a nonlinear anisotropic, 377
High frequency characterization of high temperature superconducting thin-film lines, 255

Infinite phased arrays of microstrip antennas on generalized anisotropic substrates, 107
Integral equation formulation of electromagnetic scattering by nonlinear dielectric objects, 357

Nonlinear optical effects in quantum well waveguide structures, 325
Nonlinear space-charge waves on an annular beam in a circular waveguide, 337
Numerical design of patch radiator arrays, 47

On dynamics of solutions of the generalized nonlinear Schrödinger equation, 407
On using the SUD-prony method to extract poles of an EM system from its transient response, 223

Reflection and transmission for planar structures of bianisotropic media, 193

Spectral domain analysis of microstrip arrays including the feed network with space-varying surface impedances and lumped elements, 69

The integral equation method in the problem of electromagnetic waves diffraction by complex bodies, 161

Who is who in nonlinear electromagnetics, 281
